

## ABSTRACT OF THE DISCLOSURE

An improved structure of a communication Internet connector is disclosed. The connector comprises a connector body, a press plate, engaging plate and a series conductive port. A pair of pivotal lugs are  
5 provided correspondingly on the surface of the connector body and at an appropriate distance from the position of the engaging plate mounted at one end at the front edge of the connector, the press plate is provided with a protruded shaft each at the bottom surface such that a pivotal moment is obtain when the pivotal shaft is pivotally mounted to the pivotal lugs. When the press  
10 plate is slightly depressed, the connector is disconnected from the connected PC or the like devices.
